Summary

Currently a Tools Programmer at Auroch Digital, I bring 6 years of industry experience in game development.

Active in the triple-I scene, I specialise in tooling to improve efficiency across disciplines and streamlining workflows, and have led technical and feature design in multiple in-house tooling solutions.

Worked on IP from Konami and Games Workshop, and shipped titles across multiple platforms in the past. My generalist background helps iterate closely with developers to create performant tools supporting their workflow.

Work Experience

Auroch Digital

Bristol, United Kingdom

Tool Programmer

Oct. 2022 - Now

- Product owner and key developer for an internal resource management tool in .NET environment, leading technical and feature design, communicating timeline to stakeholders, and ensuring quality timely delivery.
- In charge of an in-house data editor to overcome Unity's limitations on data serialisation. Supporting designer's requirements for complex data editing while working with Perforce.
- Extended Unity's timeline tool to create cutscenes for Mars Horizon 2, enabling artists to deliver cinematic for greenlight deck and announcement trailer.
- Built a code generation tool for programmers to improve efficiency and resolving bugs before they surface in build.
- Collaborated with stakeholders and took ownership of the successful demo release of Warhammer Survivor. Iterate closely with designers to develop new weapons that met the IP licensor's strict requirements.
- Created UI and core gameplay system for Mars Horizon 2 and contributing to main deliverables in milestones.

Q-Games

Kyoto, Japan

Game Developer

Nov. 2020 - Aug. 2022

- Responsible for player's scripting and UI in Frogger and the Rumbling Ruins, a well received title on multiple platforms in Apple Arcade built by Objective-C and Unity. Collaborated with artists to implement animation, movement and interactability of the main character.
- Maintained in-studio build machine with working experience in Jenkins and Mercurial SCM. Ensured a timely delivery of stable weekly builds to our publisher Konami.
- Assisted in the release of a major update for Frogger in ToyTown, implementing new features and fixed bugs.

InCrowd Sports

Brighton, United Kingdom

Junior Developer

Jun. 2018 - Sept. 2019

- Developed and maintained a large array of Android apps using Kotlin. Worked with third party and used OAuth framework to provide authentication for premiere videos.
- Maintained an industry-leading LED display software with WPF whilst creating plugins to attract client's interest.

Tech Demo

Procedural Tree Generation

Mesh Manipulation, Procedural Generation

- Porting a tree generation algorithm invented by Nicholas McDonald to allow dynamic tree generation in Unity.

Ongoing Personal Project

Unity, Tools Programming

- A prototype project under constant development. Serves as a testing ground to practice my skill in Unity.

Education

University of Sussex

United Kingdom

B.Sc. in Computer Science

- First class honours graduate with award-winning performance on ML project, helped teaching as a lab assistant.
